CONEG Heavy Metals

In response to your recent request, concerning our A, D, E, EW, H, K, M, N, P, W Series Pigment Foils (Manufactured after 1991), from the statements provided by our raw material suppliers and manufacturers, to the best of our knowledge, we believe that the sum of the concentration levels of lead, mercury, cadmium and hexavalent chromium do not exceed 100 parts per million by weight.

However, any anomalous or trace quantities may exist as impurities in our raw materials. A substantial number of our raw material suppliers and manufacturers, as well as in prior succession, the entire upstream raw material supplier and manufacturer chain, may not routinely test or screen for the presence of these. Additionally, any of our raw material suppliers and manufacturers may at a future time, provide other information to alter this statement. None of these chemicals are deliberately added as a raw material component to our products. Custom Foils Company does not routinely test for the presence of these.
